

# ChemTracker Compatible Storage Guide

Effective segregation in chemical storage reduces the risk of dangerous chemical reactions. This guide should be used in conjunction with information from manufacturers' safety data sheets (SDS) and chemical-specific expert knowledge.

This system is intended to be used in research settings to store laboratory-scale quantities of chemicals.

## WHAT TO SEGREGATE

Compatible Organic Bases

Compatible Pyrophoric & Water-Reactive Materials\*

Compatible Inorganic Bases

Compatible Organic Acids

Compatible Oxidizers & Peroxides  
(not including Strong, Oxidizing Acids)\*

Compatible Inorganic Acids  
(not including Oxidizers or Combustibles)

(not including Oxidizing Explosives)\*

Flammables, Combustibles, & Organic Solvents

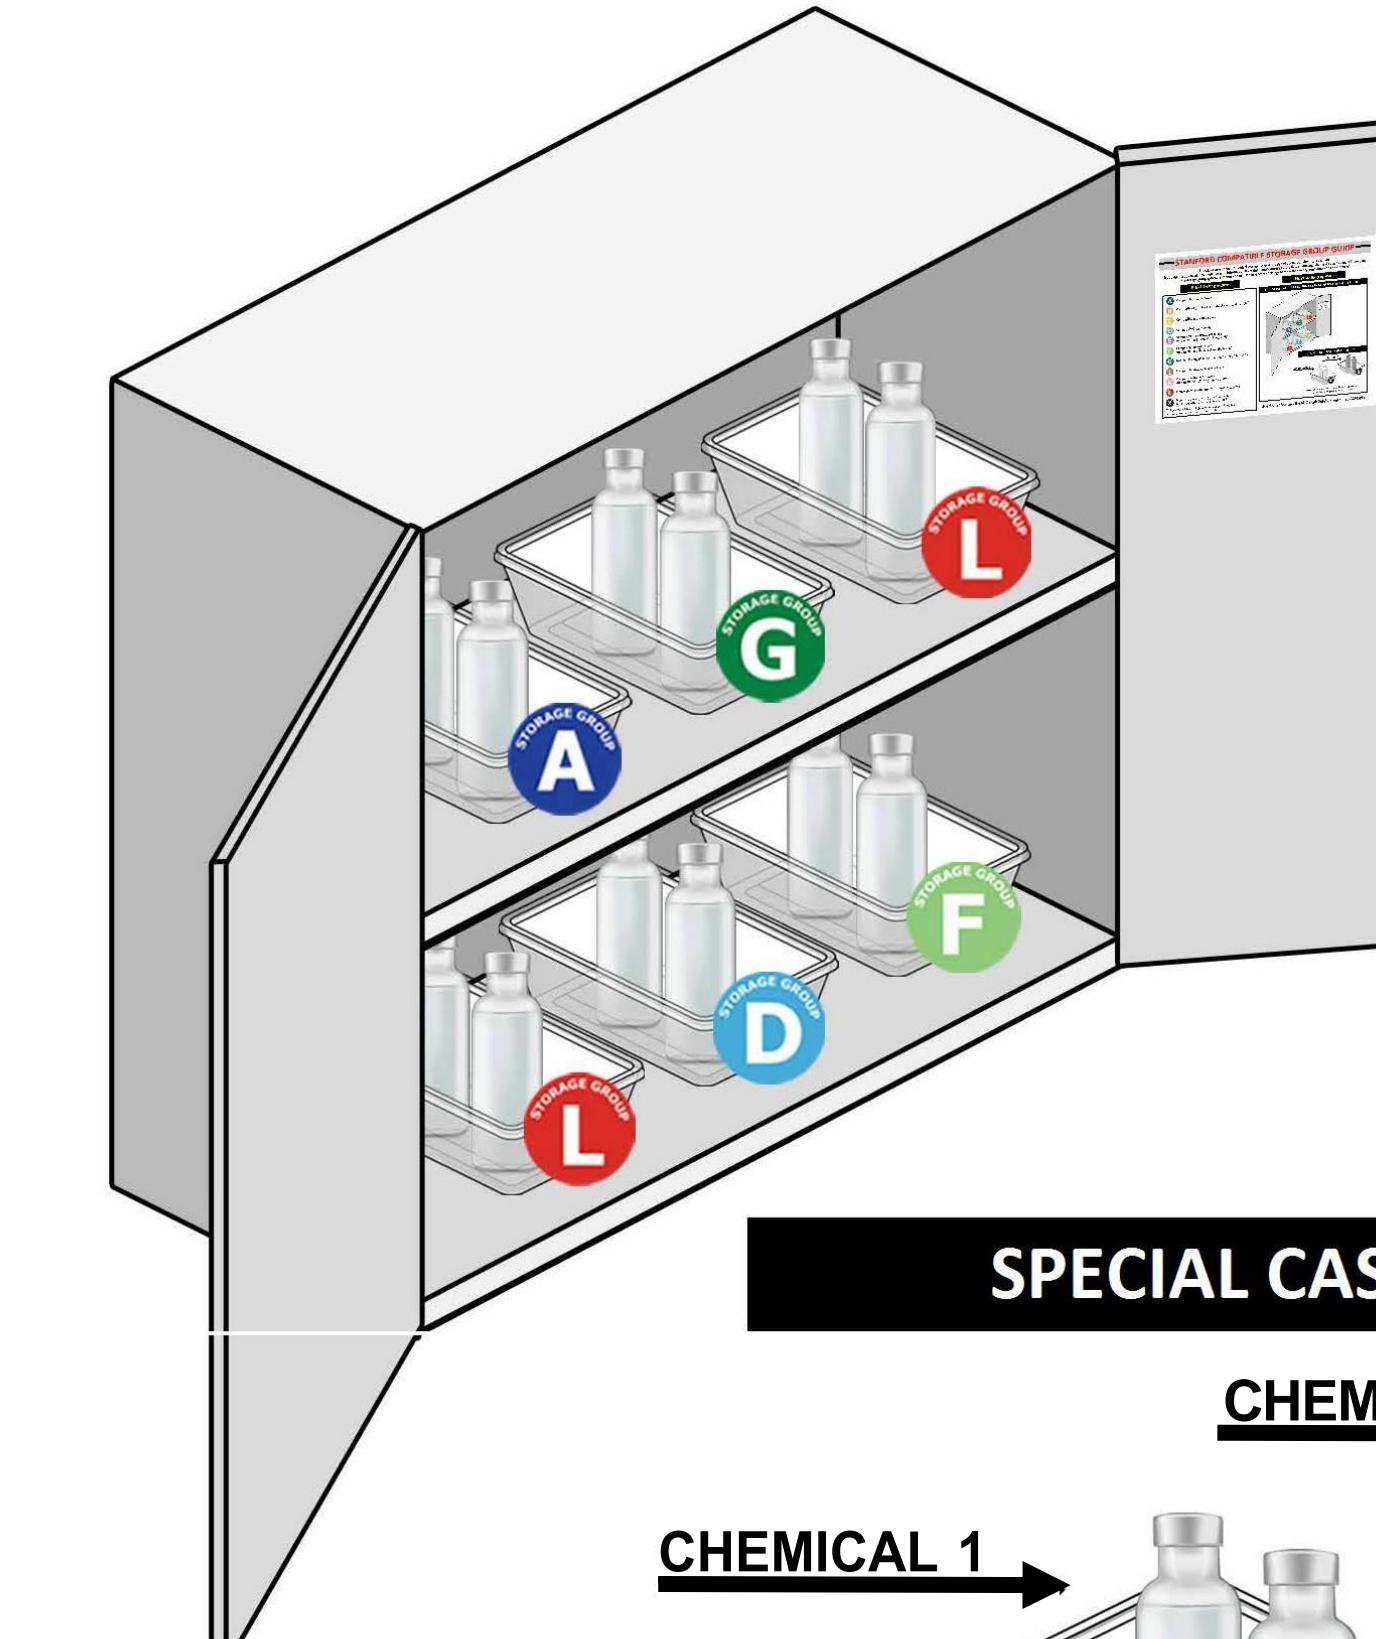

Incompatible with ALL Other Chemicals  
(including other chemicals within X) \*

\* These materials are likely to require special handling and storage conditions. Use extreme caution.

## HOW TO SEGREGATE

### USE SEPARATE SECONDARY CONTAINERS FOR EACH GROUP

### SPECIAL CASE FOR GROUP X

NOTE: Different chemicals within Storage Group X must be segregated from each other.
