

LAB SAFETY AWARENESS WEEK

Safety Equipment in the Lab

Maintaining safety equipment is critical.

- Know the location of the nearest emergency eyewash and safety shower before starting any work in the laboratory.
- Test eyewashes weekly and record the date.
- Check if appropriate gloves and safety glasses are available and in good condition.
- Ensure a spill kit is available and appropriate for the hazards in your lab.
- Do not use broken or damaged equipment – submit a work order or schedule its service immediately.
- Access to the eyewash, safety shower, fire extinguishers, and spill kits must be unobstructed.

EHS is here to support the Texas A&M University academic community in safely achieving their research goals.
